# SLE5 Label Sensor

**BANNER**®
more sensors, more solutions

## Datasheet

- Single-layer and multilayer label detection with 5 mm slot width and 50 mm slot depth
- Sensor can be configured to detect the label or the backing paper
- Infrared LED can detect a label on translucent backing paper
- 0.5 mm minimum label size or gap width for a wide variety of products
- LED Indicators display output or TEACH status for visual monitoring and troubleshooting
- Push button or remote TEACH for easy configuration
- 40µs response speed (12.5 kHz switching frequency) for increased position accuracy
- Rugged IP65 housing for use in harsh environments

⚠️ **WARNING:**
- **Do not use this device for personnel protection**
- Using this device for personnel protection could result in serious injury or death.
- This device does not include the self-checking redundant circuitry necessary to allow its use in personnel safety applications. A device failure or malfunction can cause either an energized (on) or de-energized (off) output condition.

## Models

| Model Number | Supply Voltage | Output | Connections |
|---|---|---|---|
| SLE5-PIR-2M | 10 V dc to 30 V dc | PNP | 2 m (6.5 ft) unterminated 4-wire PVC cable |
| SLE5-PIR-Q7 | | PNP | Integral 4-pin M8/Pico-style male quick disconnect |
| SLE5-NIR-2M | | NPN | 2 m (6.5 ft) unterminated 4-wire PVC cable |
| SLE5-NIR-Q7 | | NPN | Integral 4-pin M8/Pico-style male quick disconnect |

## Wiring

| 4-pin M8/Pico-style (male) quick disconnect | Pin | Wire Color | Description |
|---|---|---|---|
| 2 — 4<br>1 — 3 | 1 | Brown (bn) | 10 V dc to 30 V dc |
| | 2 | White (wh) | SET Remote Input |
| | 3 | Blue (bu) | Ground |
| | 4 | Black (bk) | Output |

## Configuring the Sensor

Use the button or the remote input to set the detection threshold between the backing paper and the label, perform a factory reset, and lock out the button to prevent erroneous changes to the sensor settings.

### Perform a Static TEACH

Follow these steps to manually perform a static TEACH.

1. Place the object to detect (the backing paper or the label) into the sensor slot. If necessary, remove one or more labels to help position the labels.
2. Press SET for 3 seconds until the amber LED (Out) blinks.

   When you press SET, if the amber LED is on, it will turn off in 1 second. At this stage, the switching output holds the last valid status before the TEACH procedure began.
3. Release SET.
   The sensor acquires the target and the amber LED blinks slowly.
4. Place the object to ignore (the backing paper or the label) into the sensor slot.
5. Press and release SET.
   The sensor acquires the target. The green LED blinks three times to indicate the correct TEACH.

If a TEACH procedure was unsuccessful, the green LED blinks quickly. Press and release SET to return to the beginning of the TEACH mode and repeat the process. If the error continues, the label-to-background contrast might be insufficient to obtain a correct TEACH result.

## Perform a Dynamic TEACH

Follow these steps to perform a dynamic TEACH procedure, which can be performed with the machine running.

1. Insert the labels into the sensor slot.
2. Press SET for 1 second until the green LED (Ready) turns off.

   If the amber LED (Out) is on, it turns off when the green LED turns off.
3. Release SET.
   The switching output holds on the last valid status before the TEACH procedure began.
4. The green LED blinks slowly, indicating a TEACH procedure is in progress.
5. Slide the labels through the sensor, at a maximum speed of 20 m/min (30 cm/s) until at least 3 to 8 labels moves through the sensor.
6. Press and release SET to end the TEACH stage.
   The green LED blinks three times to indicate the correct TEACH.

If a TEACH procedure was unsuccessful, the green LED blinks quickly. Press and release SET to return to the beginning of the TEACH mode and repeat the process. If the error continues, the label-to-background contrast might be insufficient to obtain a correct TEACH result.

## Perform a Factory Reset

Follow these steps to perform a factory reset of the settings.

1. Press SET for 12 seconds until both the green (Ready) and amber (Out) LEDs blink quickly.
2. Release SET.
   The device factory settings are now restored.

## Configure the Sensor for Light (LO) or Dark Operate (DO)

To change the sensor from light operate (LO) to dark operate (DO), follow these steps.

By factory default, the output is active on the backing paper (light operate). The label detection procedure can be performed statically or dynamically.

1. Press and hold SET (about 7 seconds) until both the green and amber LEDs blink at the same time.
2. Release SET.
   The output LO/DO state now reversed compared to previous conditions.

## Lock the SET Button

Use the remote wire to prevent the sensor's SET button from being used.

1. To lock out the sensor's SET button, connect the remote wire to +VDC and apply power on to the sensor.
   After applying power to the sensor, the SET button is inactive and configuring the sensor can only be done with the remote input wire.
2. To unlock SET button, disconnect the remote wire and cycle power to the sensor.

## Remote Input

It is possible to perform the same Set check from outside the sensor using the Remote input.

When the Remote input wire is connected to +V DC, the sensor acts the same as if the Set button was pressed. After a SET button lock, the remote input wire can still be used to program the sensor.

## Installing the Sensor

The SLE5 sensor was designed for dovetail mounting or standard mounting using threaded holes or clearance holes.
## Dimensions

All measurements are listed in millimeters [inches], unless noted otherwise.
Figure 1. Cabled Models

Figure 2. Quick Disconnect Models

## Specifications

**Supply Voltage and Current**
10 V dc to 30 V dc
Output current: 100 mA maximum
Consumption (not including output current): 30 mA maximum
Protected against transient voltages

**Switching Frequency**
12 kHz

**Output**
PNP or NPN, depending on the model
Protected against continuous overload

**Response Time**
40 µs maximum

**Weights**
Cable model: 85 g
4-pin M8/Pico-style model: 46 g

**Indicators**
Amber: Output
Green: Ready

**Construction**
Zinc alloy body; PBT cover

**Slot**
Width: 5 mm
Depth: 50 mm

**Light Emissions**
850 nm infrared LED
Frequency: 50 kHz modulated light

**Connection**
2 m 4-wire cable or 4-pin M8/Pico-style integrated into the housing, depending on the model

**Temperature**
Operating: –20 °C to +55 °C (–4 °F to +131°F)
Storage: –20 °C to +70 °C (–4 °F to +158 °F)

**Environmental Rating**
IEC IP65

**Application**
Minimum label width and/or space between labels 0.5 mm to 2 mm
Conveyor speed during set-up: 20 m/min (300 mm/s) maximum

## Accessories

### Cordsets

| 4-Pin Threaded M8/Pico-Style Cordsets with Shield | | | | |
|---|---|---|---|---|
| Model | Length | Style | Dimensions | Pinout (Female) |
| PKG4MS-2 | 2.04 m (6.68 ft) | Straight |  |  |
| PKG4MS-5 | 5 m (16.4 ft) | | | |
| PKG4MS-9 | 9.04 m (29.6 ft) | | | |
| PKW4MS-2 | 2 m (6.56 ft) | Right Angle |  | 1 = Brown<br>2 = White<br>3 = Blue<br>4 = Black |
| PKW4MS-5 | 5 m (16.4 ft) | | | |
| PKW4MS-9 | 9 m (29.5 ft) | | | |

## Banner Engineering Corp. Limited Warranty

Banner Engineering Corp. warrants its products to be free from defects in material and workmanship for one year following the date of shipment. Banner Engineering Corp. will repair or replace, free of charge, any product of its manufacture which, at the time it is returned to the factory, is found to have been defective during the warranty period. This warranty does not cover damage or liability for misuse, abuse, or the improper application or installation of the Banner product.

**THIS LIMITED WARRANTY IS EXCLUSIVE AND IN LIEU OF ALL OTHER WARRANTIES WHETHER EXPRESS OR IMPLIED (INCLUDING, WITHOUT LIMITATION, ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE), AND WHETHER ARISING UNDER COURSE OF PERFORMANCE, COURSE OF DEALING OR TRADE USAGE.**

This Warranty is exclusive and limited to repair or, at the discretion of Banner Engineering Corp., replacement. **IN NO EVENT SHALL BANNER ENGINEERING CORP. BE LIABLE TO BUYER OR ANY OTHER PERSON OR ENTITY FOR ANY EXTRA COSTS, EXPENSES, LOSSES, LOSS OF PROFITS, OR ANY INCIDENTAL, CONSEQUENTIAL OR SPECIAL DAMAGES RESULTING FROM ANY PRODUCT DEFECT OR FROM THE USE OR INABILITY TO USE THE PRODUCT, WHETHER ARISING IN CONTRACT OR WARRANTY, STATUTE, TORT, STRICT LIABILITY, NEGLIGENCE, OR OTHERWISE.**

Banner Engineering Corp. reserves the right to change, modify or improve the design of the product without assuming any obligations or liabilities relating to any product previously manufactured by Banner Engineering Corp. Any misuse, abuse, or improper application or installation of this product or use of the product for personal protection applications when the product is identified as not intended for such purposes will void the product warranty. Any modifications to this product without prior express approval by Banner Engineering Corp will void the product warranties. All specifications published in this document are subject to change; Banner reserves the right to modify product specifications or update documentation at any time. Specifications and product information in English supersede that which is provided in any other language. For the most recent version of any documentation, refer to: www.bannerengineering.com.
