

Through-beam photoelectric sensor
Operating instructions

Safety notes

- Not a safety component in accordance with EU Machinery Directive.
- Read the operating instructions before commissioning.
- UL: Only for NFPA 79 applications
- Connection, mounting, and setting is only to be performed by trained specialists.
- When commissioning, protect the device from moisture and contamination.

Correct use

The GSE10 is a photoelectric sensor for the optical, noncontact detection of objects. A sender (GS10) and a receiver (GE10) are required for operation.

Starting operation

- Connect the device to the power supply: For devices with plug connectors, attach the cable socket while the device is deenergized and screw it in tightly. Connect the individual wires of the connecting cable as shown in Graphic [D]. Switch on the operating voltage. The green indicator LED lights up.
- Check the application conditions: Adjust the distance between the sender and the receiver according to the corresponding diagram [E].
- Position the receiver in the beam path of the sender. Align the light beam of the sender with the receiver [C].
- Versions without potentiometer:** If the receiver's yellow indicator LED lights up continuously, this means the receiver is positively identified, function reserve ≥ 1.5 . If the yellow indicator LED is flashing, this means the sender is detected in the peripheral area (function reserve < 1.5). If the yellow indicator LED does not light up, this means the sender is outside the sensing range. Readjust the sender and receiver. Reduce the distance if necessary. Check the application conditions (see 2).
- Versions with potentiometer:** When there is a free light path between the sender and receiver, turn the potentiometer at the receiver clockwise until the yellow indicator LED lights up continuously. Reflector is positively identified, function reserve = 1.5. If the yellow indicator LED is flashing, this means the sender is detected in the peripheral area (function reserve < 1.5). If the yellow indicator LED does not light up, this means the sender is outside the sensing range. Readjust and clean the sender and receiver. Reduce the distance if necessary. Check the application conditions (see 2).
- Setting light/dark switching [A1]:**
Rotary switch to L = light switching
Rotary switch to D = dark switching
GSE10-Rnnnn:
Switching behavior corresponds to Q (PNP), L; [B]

Options

The photoelectric senders WS 14-2 have a test input ("TE" - see technical data) that can be used to check whether the sender-receiver system is working correctly:
TE to OV = Sender OFF

When there is a free light path between the sender and the receiver (yellow indicator LED lights up), activate the test input (see connection diagram [B]). Sender LED is switched off. At the same time, the yellow indicator LED must switch off and the status of the switching output must change. If this does not take place, a fault has occurred: Clean and realign the sender / receiver and check the power supply.

Maintenance

- SICK light barriers are maintenance-free.
- We recommend doing the following regularly
 - clean the external lens surfaces
 - check the screw connections and plug-in connections.
 - Do not use alcohol for cleaning.

No modifications may be made to devices.

Wartung

SICK-Lichtschranken sind wartungsfrei. Wir empfehlen, in regelmäßigen Abständen - die optischen Grenzflächen zu reinigen, - Verschraubungen und Steckverbindungen zu überprüfen. - Kein Alkohol zur Reinigung verwenden. Veränderungen an Geräten dürfen nicht vorgenommen werden.

Optionen

Die Sender-Lichtschranken GS10 (mit Ausnahme der GS10-Unnnn) verfügen über einen „Test“-Eingang (siehe technische Daten): „Test“ nach 0V = Sender AUS
Bei freiem Lichtweg zwischen Sender und Empfänger (gelbe Anzeige-LED leuchtet) den Testeingang aktivieren. Sende-LED schaltet aus. Gleichzeitig muss die gelbe Anzeige-LED erlöschen und sich der Zustand des Schaltausgangs ändern. Ist dies nicht der Fall, liegt eine Störung vor: Sender / Empfänger reinigen, neu Ausrichten, Spannungsversorgung prüfen.
